What is the CMMC?

The Cybersecurity Maturity Model Certification (CMMC) is a new requirement for Department of Defense contracts to certify that contracting organizations can adequately protect sensitive unclassified information. There are five levels of CMMC certification and the RFI/RFP documents for contracts you bid on will specify the level required. Certification requirements will gradually be applied to new contracts starting in FY2021 and increasing to cover all contracts by FY2026.

The primary components of the CMMC are drawn from standards that you are likely familiar with (48 CFR 52.204-21 and NIST 800-171) but also contains some additional unique requirements. Certification is good for 3 years and applies to an entire organization or environment within an organization. You do not need to complete certification for each contract.

You will not be able to self-certify; third-party assessment is required. Assessment and consulting organizations are authorized and accredited by the CMMC Accreditation Body (CMMC-AB), who hosts a list of organizations that can help you prepare for and reach certification.
